Set location

Choose signup

New comer users need to choose books that they're interested, to identify their preference

After preference being set, send user to home interface with suggested book; which is prepared by analyzing the preference

Clicking on book borrowed

Click on book owned

Press return brings up the scan page

When clicking on the user name, bring user to the page that shows the details about the clicked user name

Bring up camera for scanning if borrowing a book

Take user to input information interface if adding a new book

User cannot edit other users profile.

Bring user to home interface

Search on search bar

Press my shelf

Press add button

Press requests

Press on received request to accept or decline request

Press on sent requests to check for processing status and pickup location if available

Set pickup location when accepted request

Press scan

Search other user

**The text in red is the interface name

All image, icon, UI resources comes from: <https://www.fluidui.com>
The images of interface mockups are also made in: <https://www.fluidui.com>
